

Boost WP

7-40-7 Root Enhancer

Boost wettable power as a tank mix addition to a liquid fertilizer program will provide the plants with the energy needed to grow roots. It includes the active ingredients that will also help the plant to produce more photosynthetic activity, reduce plant stresses and provide recovery from wear. **Boost WP** was designed to enhance the value of EarthWorks SEA 3 applications for golf course fairways and athletic fields but has been shown to have great application value in multiple situations.

This water soluble product goes into suspension very quickly and easily with little mess. Application rates can be as little as three pounds per acre when tank mixed with other fertilizers and bio-stimulants. Forty pounds of product are conveniently packaged in five gallon reusable buckets.

A combination of stabilizing and chelating elements are used in formulating **Boost WP**. This allows the nutrients to stay in soil solution for better absorption by the plant. This powerful stabilization process is enhanced by adding multiple forms of carbon that stimulate microbial activity, at the point of the nutrient molecule, which further enhances the uptake of these soluble nutrients. When combined with other fertilizers and bio-stimulants **Boost WP** can help to stabilize the entire tank mix aiding in plant uptake and availability making all the products applied more efficient.

Boost WP is formulated from Monammonium Phosphate, Monopotassium Phosphate, Potassium Nitrate and Magnesium Sulfate to maximize phosphorous uptake to the roots. EarthWorks has added micronized humic acids and other carbon based materials to help promote microbial activity in the root zone and to maximize nutrient uptake to the plant.

Liquid Organics:

- *Builds Strong Roots*
- *Quicker Recovery from Wear*
- *Helps Support Photosynthesis*
- *Carbon Based to Feed Microbial Populations*

Boost WP

7-40-7 Root Enhancer

EarthWorks Liquid Organics...the key to success when building a healthy environment.

Boost WP 7-40-7 Guaranteed Analysis

Total Nitrogen (N).....	7.00%
6.3% Ammoniacal Nitrogen	
0.7% Nitrate Nitrogen	
Phosphate (P ₂ O ₅).....	40.00%
Soluble Potash (K ₂ O).....	7.00%
Magnesium (Mg).....	1.00%

Derived From:

Monammonium Phosphate, Monopotassium Phosphate, Potassium Nitrate Magnesium Sulfate, Seaweed

Application Rates & Programs

Turf Maintenance:

Apply 3 lbs per acre of turf in a minimum of 50 gallons of water. Ideally apply once per month but as often as bi-monthly. For maximum uptake value, tank mix with other bio-stimulants such as EarthWorks SEA 3.

Seed Establishment:

Mix ¼ pound (4 oz) of product into 3 gallons of water. Apply this mixture to 1000 square feet of the newly seeded area weekly through establishment. Continue for 2 months after initial mowing.

Repair of Damaged Turf:

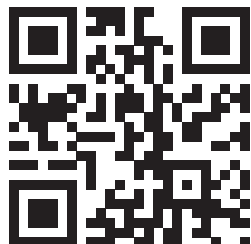

Mix ½ pound (8oz) of product into 3 gallons of water. Apply this mixture to 1000 square feet of damaged turf. Ideally, tank mix with soluble fertilizers and bio-stimulants for maximum value. Continue as needed until damaged turf is fully healed.

Sod Establishment:

Mix ½ pound (8oz) of product into 3 gallons of water. Apply this mixture to 1000 square feet of newly established sod one or twice a month until sod is fully established.

Fairways & Athletic Fields:

Apply Boost WP monthly at the turf maintenance rates. Tank mix along with EarthWorks Sea 3 for maximum value.
